

ZC210 - DMR

Our ZC210 DMR reticle was designed in cooperation with advisors from active-duty Austrian Special Forces, to enhance a shooters ability for quick and precise targeting.

Featuring a fine center dot for precision shots, with a square outer box for more rapid engagements, the DMR Reticle also incorporates lead marks on the bottom of the main horizontal stadia for engaging moving targets at speeds of 1, 2, and 3 m/s.*

While the DMR reticle lower grid supports accurate holdovers and fast shot correction information, our ZC210 was also designed with a -2.0 mil turret feature allowing the user the ability to quickly employ a speed drop method by simply dialing back while still being able to easily return to their original zero for dialing when a more precise long-range solution is required. The ZC210 DMR reticle also offers illumination in key areas, with the user being able to opt between red or green illumination. This overall design ensures the ZC210 maximizes long-range capabilities while maintaining user ability for swift target acquisition.
